**MYCROFT IDENTITY-MANAGEMENT SOLUTION
BRINGS GREATER EFFICIENCY, CUSTOMIZATION TO MORE THAN
35,000 USERS AT MICHIGAN'S LANSING COMMUNITY COLLEGE**

NEW YORK, February 12, 2009 – Mycroft, the premier provider of Identity Management and Compliance consulting, technology and management services, announced today the implementation of an identity-management system benefiting 35,000 users at Lansing Community College (LCC).

LCC, Michigan's third-largest college, leveraged Mycroft's industry-leading expertise, deep engineering skills and proprietary tools to maximize its investment in an identity management system which will guide how LCC grants and manages electronic information access across its several campuses and learning centers. Immediate efficiencies gained by LCC include:

- Elimination of substantial manual effort
- Automated provisioning linked to LCC student and employee HR systems
- Best practices for the creation and management of user account policies

Additional benefits for LCC

Using the Oracle Identity Manager (OIM) and Mycroft's proprietary Higher Education OIM framework, LCC gains far greater control over user access protocols and immediately resolves a number of critical information-access challenges faced by all colleges and universities. The cost per incident of a security breach ranges from a minimum of \$7 million and may reach into the tens of millions of dollars. Security and data breach occurrence is the greatest within the higher education market. These challenges are particularly acute at a technology-forward institution such as LCC, which educates many students through its "eCampus" on-line environment.

"We determined that our prior identity management system required some operational improvements, particularly to reflect the fact that, as a community college, we tend to build more short-term student relationships than four-year institutions," says Christopher A. Bennett, director of information security at LCC. "One of the challenges we faced was unnecessarily maintaining hundreds of on-line accounts for people who requested information but never wound up applying to our college. Mycroft was able to give us a far more efficient, consistent and automated process, tailored specifically for higher-education institutions."

Creating immediate efficiencies

According to Bennett, LCC has already gained many efficiencies from the Mycroft system, including provisioning for new students and employees that feeds automatically into several downstream systems, saving the college's IT staff considerable work. Bennett adds that LCC will likely add de-provisioning support for some systems in the near future, as well as expand the number of connected systems it manages.

Terry Jost, chief executive officer of Mycroft, notes that universities and colleges such as LCC face some of the most significant security and identity management challenges.

"The higher-education vertical has certain processes and applications that are unique to this style enterprise," says Jost. "Mycroft has developed an identity management solution specifically for higher education institutions which provides an enhanced user interface and Oracle templates, providing day-one functionality out of the box and rapid implementation. Our clients accomplish Phase I implementation in nearly half the time of traditional project approaches. Lansing Community College is just the latest in Mycroft's successful implementations for colleges and universities."
